Asynchronous Communication and Engineering Throughput in Distributed Teams

Chloe Varga, Benedikt Osei
Department of Imaginary Studies, Fictional University

Abstract. Using repository data from 95 fully distributed engineering teams of a fictional company, we show that teams which moved status meetings to written asynchronous updates increased merged pull requests per engineer by 7 percent over the following two quarters.

Keywords: distributed teams, remote work, asynchronous communication, throughput

Kurgusal örnek veri. AI Agents Masterclass (@selma.builds) için üretildi; gerçek bir yayın değildir.

Method

Staggered adoption design with team and quarter fixed effects.

Results

Merged pull requests per engineer rose 7 percent; review latency fell by 9 hours.

Conclusion

Using repository data from 95 fully distributed engineering teams of a fictional company, we show that teams which moved status meetings to written asynchronous updates increased merged pull requests per engineer by 7 percent over the following two quarters.
