Fully Remote Versus Office Work: A Randomised Trial in Data Entry

CASTELLANO, R. & LINDGREN, M.
Department of Imaginary Studies, Fictional University

Abstract. We randomly assigned 300 data-entry workers of a fictional outsourcing firm to fully remote or office work for eight weeks. Remote workers entered 8 percent fewer records per hour, mainly because of more frequent short breaks, while error rates were unchanged.

Keywords: remote work, randomised trial, data entry, productivity

Kurgusal örnek veri. AI Agents Masterclass (@selma.builds) için üretildi; gerçek bir yayın değildir.

Method

Keystroke-level logs measure records entered per hour; errors audited on a random sample.

Results

Records per hour: office 61.2, remote 56.3 ($p < 0.01$).

Conclusion

Remote workers entered 8 percent fewer records per hour, mainly because of more frequent short breaks, while error rates were unchanged.
