Return-to-Office Mandates and Employee Output

Samuel Achterberg, Yuki Moreno
Department of Imaginary Studies, Fictional University

Abstract. We study return-to-office mandates introduced at different times across 37 units of a fictional technology company. Mandates did not raise measured output per employee, but increased voluntary turnover among senior staff.

Keywords: return to office, remote work, output, turnover

Kurgusal örnek veri. AI Agents Masterclass (@selma.builds) için üretildi; gerçek bir yayın değildir.

Method

Difference-in-differences comparing units with and without mandates.

Results

Output per employee changed by -0.8 percent (not significant); senior turnover rose 14 percent.

Conclusion

Mandates did not raise measured output per employee, but increased voluntary turnover among senior staff.
