Manager Trust and the Performance of Remote Teams

Grace Oyelaran, Henrik Solberg
Department of Imaginary Studies, Fictional University

Abstract. Drawing on matched survey and performance data from 210 remote teams in a fictional software and services group, we show that teams reporting higher manager trust achieve higher objective performance ratings, and that close monitoring is associated with lower output.

Keywords: remote teams, trust, team performance, monitoring

Kurgusal örnek veri. AI Agents Masterclass (@selma.builds) için üretildi; gerçek bir yayın değildir.

Method

Multilevel models linking trust surveys to quarterly objective team performance scores.

Results

One standard deviation higher trust is associated with 0.22 SD higher team performance.

Conclusion

Drawing on matched survey and performance data from 210 remote teams in a fictional software and services group, we show that teams reporting higher manager trust achieve higher objective performance ratings, and that close monitoring is associated with lower output.
